DWA_08 Discussion Questions

In this module you will continue with your "Book Connect" codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

───

1. What parts of encapsulating your logic were easy?

Creating the function for the default html mainly required copying and pasting the code that was situated in other areas since the logic was the same.

───

2. What parts of encapsulating your logic were hard?

After situating the callbacks where needed, creating the parameters to be replaced by the correct content required naming that was easy enough to figure out functionality, and arranging them correctly was tricky.

───

3. Is abstracting the book preview a good or bad idea? Why?

A good idea. The code written for this html was duplicated in three areas. Putting the logic into one function to be applied where needed was a solution to this redundancy.
